

3 PANEL SLIDING DOOR WITH SIDE PANEL

INSTALLATION GUIDE

IMPORTANT: Please read the complete instructions before commencing fitting.

Make sure the tray is 100% level in all directions.

Check that you have the tools required. ☐

Check the installation site is compatible with the sizes of door supplied. ☐

Check all the enclosure components are present. ☐

Check the installation kit is complete. ☐

Do Not attempt to install the product unless you can tick all 4 boxes.

The wall plugs supplied with the installation kit are for use in solid walls. Hollow or 'stud partition' walls will require alternative fixings. Please consult a hardware supplier for the correct type. It may also be necessary to consult your tiling supplier about the correct method for drilling your tiles.

ATTENTION: TAKE EXTREME CARE WHEN HANDLING GLASS, WEAR PROTECTIVE EYEWEAR AND CLOTHING. DO NOT LEAVE THE GLASS ON HARD SURFACES AND AVOID CONTACT BETWEEN THE GLASS EDGES AND HARD SURFACES OR IMPACTS DURING THE INSTALLATION.

Whether fitting
on a tray or on
a tiled Wetroom
the tray or floor
must be 100%
level.

1

1A Wall profiles are labeled Left and Right so make sure you have noted the handing. The seal should be flush on top and show a gap on the bottom.

1B Insert the bracket into the wall profile.

! 1C WARNING
Make sure the bracket is seated correctly and there is no gap between the join of the bracket and profile.

2

2A Measure distance X and Y from the back wall to the front of the wall profile and ensure it is within the adjustment range of the size chosen.

2B Plumb the wall profiles.

! 2C Make sure the bracket is seated correctly showing no gap between the join of the wall profile. Make sure the top bracket is level. Mark the wall through the slots in the wall bracket.

! NOTE ! If fitting optional LED profile the fitting procedure is different and you must follow the steps in the LED installation Guide.

Size	X	Y	Size	X	Y
700	670-685		1450		1418-1433
760	730-745		1475		1443-1458

1425		1393-1408	1800		1768-1783

3

3A Mark the centre of the slot.

3B Drill the centre of the slot. This is important to allow adjustment.

3C Insert the wall plugs.

4

4A Fit the fixed panel into the threshold. Make sure the edge of the glass is tight against the end of the cover strip. Make sure the guide is facing inside.

4B Fit the assembled profile and bracket to the fixed panel. Ensure the wall profile is seated fully at the base.

5

5A Check assembly is plumb and fix to the wall through the bottom slot first making sure there is no gap between the join of the profile and the bracket (5B) and then secure with second screw.

6

6A Note the correct orientation of the glass, arrow facing up.

6B Fit the wall profile fully onto the glass panel keeping the bottom of the profile flush with the bottom of the panel.

7

8

**Warning.**

Note that the threshold is not to be connected at this stage.

9

9A Fit the inline panel into the front threshold.

9B Fit the corner bracket into the the end of the front threshold.

9C Make sure the inline panel seats fully into the front threshold and corner bracket.

10

10A Remove the protective film from the 3M tape.

10B Plumb the inline panel with the side panel, fit the assembled inline with corner bracket into side panel and side panel threshold. Make sure to keep the top of the Inline panel away from the 3M tape until the end of step 10C

10C Starting at the bottom carefully press the Inline panel to the tape using a level as a guide to align the edge of the Inline panel and the outside face of the side panel. Keep the level tight against the side panel and move the level up slowly keeping it Inline with the point of contact of the tape and the Inline panel as you go.

10D Press the Inline panel firmly to the tape to ensure a waterproof seal.

11

11A Fit the middle bracket making sure the bolt is on the inside.

11B Fit the corner bracket to the side panel.

12

12A Note the labels on the ends of the rail. Fit plate to the top of the rail with notched side facing out.

12B Remove the roller stop from the Inline panel side.

NOTE: Check green and red labels for correct orientation

13

13A Slide the 'Inline panel' end of the top rail onto the moving panel. Note : make sure the holes in the glass for the handle are on the 'Inline panel' side.

13B Fit the roller stop.

13C Slide the top track to the centre of the glass and secure the rail with the cable ties. This will prevent the rail moving when lifting into place.

14

14A Using micro fibre cloth provided thoroughly clean the inside of the glass around the area of the top rail.

14B The top rail also needs to be thoroughly cleaned before lifting into position.

15

Max. adjustment on each side is 15mm. On fixed panel side make sure to adjust the fixed panel in the wall profile at the same time as the top rail.

15B

Adjustment 0~15mm

15A

15D

15C

15E

15F

NOTE: Take care not to rest the glass on the top of the guide.

15A Lift the moving panel and top rail into the brackets **15B & 15C**. Make sure both parts of the middle bracket **15D** are aligned to allow the rail to drop into position. Keep the bottom of the moving panel out from the guide.

15E Remove the cable ties.

15F When door is fitted move door to the closed position and slide guide over the back edge of the moving panel.

16

16B

16C

16A

16A

16D

Inside

100%

16E

16A Squeeze the fixed panel and rail together to align the bracket and plate and fix with M5 x 14 screw.

16B 1) Slide the fixing plates into the wall bracket.
2) Secure to the bracket with M4 x 10 screws.
3) Lock the rail to the bracket by tightening the grub screws.
4) Loosely fix the plastic grub screw so it is flush with the top of the bracket.

16D Secure the rail in the corner bracket with M5x14 screw.

16E Fully tighten the glass clamping screws.

17

17A Screw the plastic grub screw until it is flush with the top of the bracket **DO NOT** tighten to the glass

17B On Inline panel bracket only remove the plastic grub screw and add dab of silicone. Fit the grub screw and only loosely tighten until it just touches the glass.

17C From the top slide the cover cap onto the wall bracket.

18

18A Note the top and bottom of the handle, disassemble and fit outer handle making sure to place washers on both side of the glass.

18B When fitting the inner handle make sure the grub screws are to the bottom.

18C Fit upright seals to the edge of the fixed panel and back edge of the moving panel.

18D Fixed panel seal should be tight to the threshold, moving panel seal needs to be above the bottom guide and not touching the top rail.

Note: For fixed panel two seals are provided. Use the 14mm fin where tightness is critical due to the shower head position.

19

Aligning moving panel / adjusting rollers

The height and alignment of the door can be adjusted using the hex key provided. The moving panel must be in the closed position to access the adjusting screw through the access ports on the top of the rail. Turn clockwise to lower and anti-clockwise to raise.

The vertical alignment of the moving panel should be adjusted so there is adequate overlap with the fixed panel and the closing post.

Check the glass is touching the plastic inserts of the guide at all times, lower the panel if necessary.

20

As the fixed glass panel is adjusted in the wall profile gaps will appear between the profile and the wall, especially near the bottom.

20A Use the plastic tool provided to push the profile tight to the wall.

20B Check the fixed panel does not move and remains tight to the threshold cover strip.

21

21A Adjust the plastic screw to gently rest against the glass panel.

NOTE: This is to prevent rattling of the glass panel within the guide.

21B Open and close the moving glass panel to check that the door is sliding freely and movement within the guide is minimised.

NOTE: Ensure the entire guide assembly does not move with the sliding door as this is an indication that the plastic screw has been over tightened.

21C When satisfied with the plastic screw location, please ensure that the small grub screw is tightened to prevent any movement. This will keep the plastic screw in a fixed position.

22

Before sealing make sure all surfaces are clean, dry and free from any residue such as grout.

Use quality silicone sealant and applicator gun to finish the door.

INSIDE

22A On the inside seal top to bottom between the wall profile and the wall.

OUTSIDE

22B Seal along the bottom between the threshold and the tray. Seal 50mm vertically between the wall and the wall profile, and between the threshold and the wall profile.

22C Seal the all joints. between the foot plates and threshold.

22D Seal between the bottom of the fixed panel seal and the cover strip.

Do not use the enclosure for 24 hours.

Care And Maintenance Guide

23A For cleaning the area between the top rail and the fixed glass panel use the micro fibre cloths and card provided. Using a mild detergent dampen one of the cloths and wrap it around the plastic card provided and push between the rail and the glass. Slide the cloth over and back until clean and repeat the process with the dry cloth to shine rail and glass.

23B The moving panel can be released from the bottom guide for ease of cleaning. From inside the enclosure slide the bottom guide away from the moving panel and pull the bottom of the panel towards you. Clean the area around the base of the base of the shower.

Note: make sure to put the moving panel back into the bottom guide when finished.'
